

TikTok Auto DM Bot with Python + HTML + CSS

This project creates a simple web dashboard for:

- Sending TikTok DMs
- Managing usernames
- Running auto-replies
- Viewing bot status

Tech Stack:

- Python Flask
- HTML
- CSS
- JavaScript
- Playwright

Project Structure

```
project/
|
├─ app.py
├─ requirements.txt
├─ session.json
├─ users.csv
|
├─ templates/
│   └─ index.html
|
├─ static/
│   └─ style.css
|
└─ bot/
    └─ tiktok_bot.py
```

Install Requirements

requirements.txt

```
flask
playwright
pandas
```

Install browsers:

```
playwright install
```

Flask Backend

app.py

```
from flask import Flask, render_template, request, jsonify
from bot.tiktok_bot import send_bulk_dms

app = Flask(__name__)

@app.route('/')
def home():
    return render_template('index.html')

@app.route('/send-dms', methods=['POST'])
def send_dms():

    usernames = request.form.get('usernames')
    message = request.form.get('message')

    user_list = usernames.split('\n')

    result = send_bulk_dms(user_list, message)

    return jsonify({
        'status': result
    })
```

```
if __name__ == '__main__':  
    app.run(debug=True)
```

TikTok Bot Logic

bot/tiktok_bot.py

```
import time  
import random  
from playwright.sync_api import sync_playwright  
  
AUTO_REPLIES = {  
    'price': 'Our pricing starts from $99 😊',  
    'service': 'We help creators grow their audience 🚀',  
    'hello': 'Hey 🙌 Nice to hear from you!'  
}  
  
def delay(min_sec=2, max_sec=5):  
    time.sleep(random.uniform(min_sec, max_sec))  
  
def send_bulk_dms(usernames, message):  
  
    try:  
  
        with sync_playwright() as p:  
  
            browser = p.chromium.launch(  
                headless=False  
            )  
  
            context = browser.new_context(  
                storage_state='session.json'  
            )  
  
            page = context.new_page()  
  
            for username in usernames:  
  
                username = username.strip()  
  
                if not username:  
                    continue
```

```

try:

    page.goto(
        f'https://www.tiktok.com/@{username}'
    )

    delay()

    page.click(
        'button:has-text("Message")'
    )

    delay()

    page.fill(
        'div[contenteditable="true"]',
        message
    )

    delay()

    page.keyboard.press('Enter')

    print(
        f'Message sent to {username}'
    )

    delay(4, 8)

except Exception as e:
    print(
        f'Failed for {username}: {e}'
    )

browser.close()

return 'DMs Sent Successfully'

except Exception as e:
    return str(e)

```

Frontend HTML

templates/index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>TikTok DM Bot</title>

  <link rel="stylesheet" href="{{ url_for('static',
filename='style.css') }}">
</head>
<body>

  <div class="container">

    <h1>TikTok Auto DM Bot</h1>

    <form id="dmForm">

      <label>Usernames</label>

      <textarea
        name="usernames"
        placeholder="Enter one username per line"
        required
      ></textarea>

      <label>Message</label>

      <textarea
        name="message"
        placeholder="Enter your DM message"
        required
      ></textarea>

      <button type="submit">
        Send DMs
      </button>

    </form>

    <div id="result"></div>

  </div>
```

```
<script>

const form = document.getElementById('dmForm')

form.addEventListener('submit', async (e) => {

    e.preventDefault()

    const formData = new FormData(form)

    const response = await fetch('/send-dms', {
        method: 'POST',
        body: formData
    })

    const data = await response.json()

    document.getElementById('result').innerHTML = data.status
})

</script>

</body>
</html>
```

CSS Styling

static/style.css

```
body {
    font-family: Arial, sans-serif;
    background: #111827;
    color: white;
    margin: 0;
    padding: 0;
}

.container {
    width: 500px;
    margin: 50px auto;
    background: #1f2937;
    padding: 30px;
    border-radius: 10px;
}

h1 {
    text-align: center;
```

```
        margin-bottom: 20px;
    }

    label {
        display: block;
        margin-top: 15px;
        margin-bottom: 5px;
    }

    textarea {
        width: 100%;
        height: 120px;
        padding: 10px;
        border: none;
        border-radius: 8px;
        resize: none;
        font-size: 14px;
    }

    button {
        width: 100%;
        margin-top: 20px;
        padding: 12px;
        border: none;
        background: #2563eb;
        color: white;
        font-size: 16px;
        border-radius: 8px;
        cursor: pointer;
    }

    button:hover {
        background: #1d4ed8;
    }

    #result {
        margin-top: 20px;
        text-align: center;
        font-weight: bold;
    }
}
```

Login Session Setup

Create this temporary script once:

login.py

```
from playwright.sync_api import sync_playwright

with sync_playwright() as p:

    browser = p.chromium.launch(
        headless=False
    )

    context = browser.new_context()

    page = context.new_page()

    page.goto(
        'https://www.tiktok.com/login'
    )

    input('Login manually then press ENTER...')

    context.storage_state(
        path='session.json'
    )

    browser.close()
```

Run:

```
python login.py
```

Run Project

```
python app.py
```

Open browser:

```
http://127.0.0.1:5000
```

Features You Can Add

Future Upgrades

- AI replies
- Dashboard analytics
- Scheduled DMs
- Multiple TikTok accounts
- Proxy rotation
- CRM integration
- SQLite database
- Conversation history
- User state tracking
- Auto follow-up system

Important Reminder

TikTok frequently changes its UI and anti-bot systems.

Selectors like:

```
' .unread '  
' .message-text '
```

may require updates later.

Always test carefully and keep automation volume low.
